

PAINTS, COATINGS AND MAINTENANCE

RH1

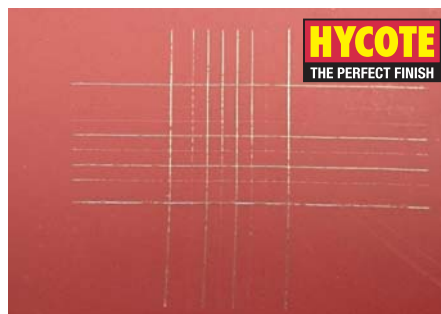

DISPLAY STAND 2017

Hycote has manufactured paints, coatings and maintenance products in the UK since 1982.

Working closely with the trade, independent retailers and consumers, we continuously strive to be the best. Our state of the art technical centre researches the latest coating technologies and houses the latest coating test equipment including accelerated weathering and corrosion testing. Hycote products give professional results with superior coverage, extreme durability, super fast drying with no runs or drips. Each of these industry standard tests are designed to simulate situations that could happen to your automotive during every day useage.

THE CROSS HATCH TEST**Results**

Leading brand A

The paint film is cut in a cross pattern before pressure sensitive tape is applied. The tape is removed rapidly to assess adhesion of the paint to the substrate. The more the paint detaches from the surface of the substrate, the worse the level of adhesion. This illustrates the superior adhesion of Hycote red primer compared to leading brand A.

The Cross Hatch simulates scratches that regularly happen to automotive paintwork and the ability to adhere to the metal or filler without flaking.

THE CONICAL MANDREL TEST**Results**

Leading brand B

The paint film is bent to an extreme angle in a conical mandrel. Any cracking or peeling of the paint demonstrates poor flexibility. These images demonstrate the superior flexibility of Hycote primer compared with leading brand B.

This test simulates a knock or dent to a panel and the paints ability to resist cracking.

THE SPRAY COVERAGE TEST

Results

A single coat of paint is applied to contrast cards and allowed to dry in a vertical position. The paint film is assessed for sag resistance and coverage. These images demonstrate superior coverage, sag and run resistance of Hycote primer compared with leading brand C.

Imagine spending hours filling and sanding to a flawless, smooth finish only to apply a thin coat of primer and it just running down the prepared area, let it dry, sand it down and start again! Not with Hycote “The Perfect Finish” every time.

THE SURFACE FINISH TEST

Results

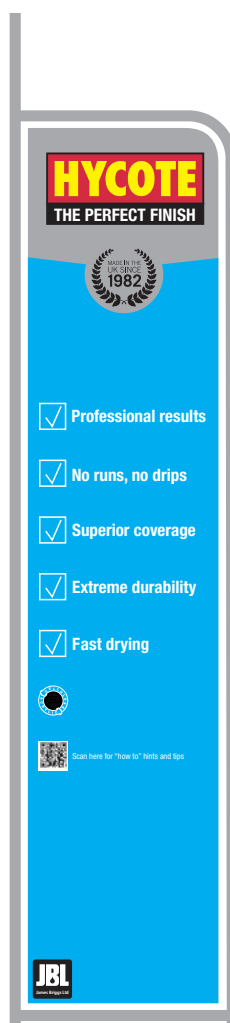

Multiple coats of paint are applied to a contrast card until full coverage is obtained. The card is then dried and the surface appearance and smoothness accessed.

These images illustrate the bitty and uneven finish on leading brand D which is caused by incompatibility or undissolved resin of the paint.

Notice the smoothness and shine of finish on the Hycote paint product.

RH1 DISPLAY STAND

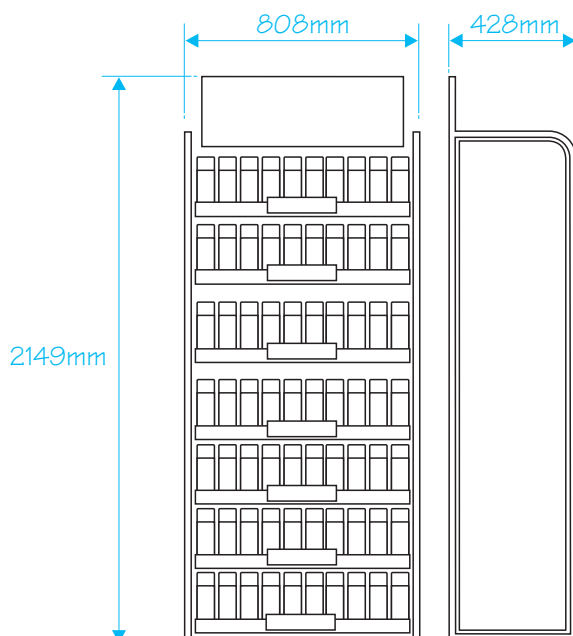

The Hycote paint and coatings range in 400ml size are now available in the new Hycote display stand.

This range covers all your needs from primers to top coats, very high temperature paints to wheel protection, lacquers to specialised paints, protective coatings to florescent colours, including a key range of maintenance products. The Hycote paint stand is both striking and easy to shop, helping consumers find the coating they are looking for easily. The Hycote range will satisfy all your paint needs whatever the size of the project!
